## $\triangle$ WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.
This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

## Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated on the separate page of this document entitled "Offer of Sale".

## Safe Drinking Water Act

In accordance with 42 USC § 300g-6, parts in this catalog are to be used exclusively for nonpotable services such as manufacturing, industrial processing, irrigation, outdoor watering, or any other uses where the water is not anticipated to be used for human consumption. The only exceptions are parts described explicitly as "low lead" or suitable for potable water.

## Transair ${ }^{\circ}$

Transair ${ }^{\circledR}$ - the fast, flexible and easy to modify pipe system for compressed air, vacuum, inert gas, process water and chemical transfer applications. Transair ${ }^{\oplus}$ components are reusable and interchangeable, which enables immediate and easy layout modifications. Unlike the performance of black iron or copper, which degrades over time due to corrosion, Transair ${ }^{\circledR}$ provides clean air quality with optimum flow rate performance.

## Reduces Plant Energy Cost

As a direct result of increasing efficiency, reducing pressure drops and eliminating leaks.

## Commitment to Sustainability

Transair ${ }^{\oplus}$ pipe and fittings are 100\% recyclable resulting in a decreased carbon footprint.

## Resistance To Corrosion

Transair ${ }^{\circledR}$ aluminum pipe is specifically powder-coated to enhance its mechanical, physical and chemical properties, making it ideal for aggressive industrial applications.

## Parker Transair

with over 20 years of industry experience, Parker Transair offers a complete line of products for your process piping systems.

# Regulations \& Certifications 

## PRODUCT QUALITY

## ISO Certification

Parker Hannifin's Fluid System Connectors manufacturing facilities are certified ISO 9001 version 2015 and operate a Quality Management System in order to ensure the level of quality and service that is expected by our customers.

## IATF Certification

Parker Hannifin is IATF 16949 version 2016 certified.

## Qualicoat Certification

All Transair aluminum pipes are coated with a lacquered powder coated finish with a Qualicoat certified coating for additional environmental protection.

## PRESSURE VESSEL REQUIREMENTS

## ASME B31.1 / B31.3 Conformity

Transair meets the requirements of ASME B31.1 \& B31.3 which stipulates "the minimum requirements for the design, materials, fabrication, erection, test and inspection of power and auxiliary piping systems for industrial institutional plants" as non-boiler external piping".

## TSSA \& CRN Approval*

Transair products are approved by the Technical Standards \& Safety Authority (TSSA) and registered under the Canadian Registration Number (CRN).

## CE Directive

Transair Products conform to the European Pressure Equipment Directive 2014/68/EU. This directive outlines the safety requirements for storage tanks, compressors, and piping.

TÜV Certification*
TÜV Rheinland certifies that Transair products meet the German AD-2000 Merkblatt rules and European Pressure Equipment Directive 2014/68/EU (EPED) requirements for piping.

## i

# ENVIRONMENTAL PROTECTION 

ISO 14001
Parker Hannifin is ISO 14001 certified for our Environmental Management System, which requires a plan to reduce the environmental impact on manufacturing and selling products.

## REACh $\downarrow$ nats

REACH - RoHS*
All Transair products comply with the REACH and RoHS directives which limit the use of hazardous substances.

Eco Design

Parker Hannifin follows Eco-design best practices and conducts a life-cycle analysis when developing new products. These steps help to reduce the long-term impact on the environment

100\% Recyclable
All Transair products are 100\% recyclable.

## MEDIA QUALITY

ISO 8573 Certification
ISO 8573 is the international standard for compressed air quality. Transair products have been tested to meet the highest air quality standard found within ISO 8573. The air quality is dependent on the treatment performed in the compressor room. Transair will not introduce additional solid particles, water, moisture, or oil into the media being conveyed.

Oil Free Certificate
Transair products will not contaminate the conveyed media with grease or oil particles.

## Silicone Free Certificate

Transair products are guaranteed to be silicone-free, a mandatory factor for premium air quality.

Labs Free Compliance
Transair products can meet the demanding cleanliness requirements, determined by the user, for paint and clean room applications.

LONG TERM COMMITMENT
10 Year Warranty
Parker Hannifin Corporation warrants its Transair products to be free of defects in material and workmanship for 10 years from the date of installation. Transair Condition Monitoring technology is warrented for 1 year.

## Over 750,000 Global Installations

Trusted for its performance, Transair ${ }^{\ominus}$ is installed in the compressor room and to the point of use in most industries such as:

## for All Types of Projects

## Transair ${ }^{\bullet}$ is the best choice for new systems or expansion

Transair offers an innovative solution for connecting the compressor room, to the main distribution piping, and supplies the points of use.

- "Full Bore" design for high flow, high efficiency.
- Superior air quality (ISO 8573-1 class 1.1.1) from the compressor room to the point of use.
- Secure connection regardless of the installation environment.
$\square$ Lightweight and compact products improve working conditions and install faster and easier.
- Easier and faster installation for easier maintenance and reduced downtime.
- Modular and reusable components for savings on capital expenditures.

## Transair ${ }^{\ominus}$ is the best choice for system retrofits

Transair is an economical, reliable, and efficient alternative to traditional steel or copper systems. Replacing old systems with Transair will reduce operating costs while improving productivity.

- with a larger inner diameter and full bore design, T ransair provides a maximum flow $20 \%$ higher than traditional steel, resulting in compressor energy savings.
$\square$ Corrosion resistant: reducing the replacement cost and frequency of filter elements.
- Superior air quality, reducing the maintenance costs of point of use machinery.

## Applications

## AIR QUALITY

Transair piping conforms to the ISO 8573 Class 1.1 .1 standard for air quality. ISO 8573 establishes the different quality levels for compressed air for the 3 components present in any system: dust, water, and oil.

Transair has been tested to achieve the highest expectations of ISO 8573 (Class 1.1.1). Note: This is only achievable with proper air generation and filtration in the compressor room, Transair will not introduce additional particles as the compressed air flows from the compressor room to the point of use.

| ISO 8573-1 CLASS: | SOLID PARTICULATES |  |  |  | WATER |  | OIL |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | MAXIMUM NUMBER OF PARTICLES PER M3 |  |  | MASS CONCENTRATION (MG / M3) | VAPOR PRESSURE DEWPOINT | LIQUID (G/M3) | TOTAL OIL* (MG/M3) |
|  | 0.1 TO 0.5 MICRON | 0.5 TO 1 MICRON | 1 TO 5 MICRON |  |  |  |  |
| 0 | AS SPECIFIED BY THE END USER OR SUPPLIER AND MORE STRINGENT THAN CLASS 1. |  |  |  |  |  |  |
| 1 | YES** | YES** | YES** | - | YES*** | - | YES |
| 2 | YES | YES | YES | - | YES | - | YES |
| 3 | - | YES | YES | - | YES | - | YES |
| 4 | - | - | YES | - | YES | - | YES |
| 5 | - | - | YES | - | YES | - | - |
| 6 | - | - | - | YES | YES | - | - |
| 7 | - | - | - | YES | - | YES | - |
| 8 | - | - | - | - | - | YES | - |
| 9 | - | - | - | - | - | YES | - |
| X | - | - | - | YES | - | YES | YES |

*Total Oil is comprised of aerosol liquid and vapor
** Transair meets the standard after 1 system purge
*** Transair meets the standard depending on atmospheric conditions

## INDUSTRIAL / INERT GAS COMPATIBILITY

Transair piping is suitable for the distribution of non-flammable (inert) gases such as: Argon, Nitrogen, Carbon Dioxide, and welding gas mixes containing these three. Transair piping and connectors have been laboratory tested for purity. Our components are compatible with $99.99 \%$ Nitrogen purity applications.

| GAS | COMPATIBLE WITH TRANSAIR (YES / NO) |
| :--- | :---: |
| NITROGEN $\left(\mathrm{N}_{2}\right)$ | YES |
| ARGON $\left(\mathrm{AR}_{2}\right)$ | YES |
| CARBON DIOXIDE $\left(\mathrm{CO}_{2}\right)$ | YES |
| HELIUM $\left(\mathrm{HE}_{2}\right)$ | YES |
| ARGON $\left(\mathrm{AR}_{2}\right)+$ CARBON DIOXIDE $\left(\mathrm{CO}_{2}\right)$ MIX | YES - ALL RATIOS |
| $\operatorname{OXYGEN~}\left(\mathrm{O}_{2}\right)$ | YES - UP TO 22\% |
| HYDROGEN $\left(\mathrm{H}_{2}\right)$ | YES - UP TO 4\% |

## VACUUM

## Transair piping can be used for vacuum applications down to 0.03 " Hg (1mbar) absolute pressure.

## Services and Tools

## Parker Transair offers a robust offering of services and tools to support every step of the project from design, estimation, delivery, and installation.

## DESIGN SUPPORT

Transair offers a suite of tools to help in the design of an aluminum system.

We offer two different calculators to help select the right diameter for the project.

Flow Calculator: This calculator will size the aluminum pipe for a compressed air systemVacuum Calculator: This calculator will size the aluminum pipe for a vacuum system

Visit www.parker.com/transair or scan the QR Code to view our library of design tools.

## Design Software

We offer a downloadable software to help design simple systems. for more complex systems, use either our REVIT or CAD files.

## CAD Files

Transair core products are available in STEP format on www.parker.com/transair

Please contact us for additional formats.

## Specification Document

We provide a document dedicated to the technical characteristics of our products. This document is vital when evaluating our products or submitting a project bid.

## ESTIMATING SUPPORT

Transair offers personal support and online tools for accurately estimating the cost of your project.

We offer two different calculators to help determine the pay-back for installing a Transair System

Energy Savings Calculator: This calculator evaluates the energy cost of your current system and the return on investment for switching to Transair.

- Value Calculator: This calculator illustrates the typical savings from installing Transair over a copper or steel pipe system.

## Quotation Support

Our team of Transair representatives is available to help you with your next quote. Our team can help suggest products, provide a bill of material, provide system drawings, and answer any technical questions you may have!

## INSTALLATION SUPPORT

## Installation Manual

Our detailed manual can answer most of your questions regarding product installation and best practices for commissioning the system. A copy of the manual can be found later in this catalog.

## How-to Videos

We offer a series of videos covering how to properly install aluminum pipe and Transair Condition Monitoring products.

## Training

Our representatives will travel to the job site to conduct hands-on installation training. Upon successful completion, you will receive a certificate of completion wallet card.

## CUSTOMER SERVICE

Our team of customer service representatives are here to help you! Our reps can help you with the following:

- Product Availability
- Delivery time and modifications
- order processing
- Technical Information / specification sheets

## Use one of the below

 methods to contact us:
## Phone

## Transair Aluminum Range

## Connection Technology

Transair's innovative technology enables rapid and easy assembly with quick connection of components to the aluminum pipe. This technology takes into account the specific requirements of each diameter and provides the user with an optimum safety coefficient and easy connection.

## 1/2" ( 16.5 mm ) • $1^{\prime \prime}(25 \mathrm{~mm}) \cdot 1-1 / 2^{\prime \prime}(40 \mathrm{~mm})$

In sizes $1 / 2^{\prime \prime}(16,5 \mathrm{~mm}), 1^{\prime \prime}(25 \mathrm{~mm})$, and $1-1 / 2^{\prime \prime}(40 \mathrm{~mm})$, Transair aluminum pipe uses push to connect technology. Simply push the pipe into the connector until it meets the depth mark on the pipe. The gripping ring will then engage and prevent the pipe from sliding out of the connector.

Installation Video

## 2" ( 50 mm ) • 2-1/2" ( 63 mm )

In sizes 2" (50mm) and 2-1/2" (63mm), Transair aluminum pipe uses snap ring technology. Place the snap ring in the two holes at the end of the pipe and slide the nut in-place. Next, hand tighten the nut into the connector body. Lastly, use a pare of spanner wrenches to fully tighten the connector.

## 3" (76mm) • 4" (101mm) • 6" (168mm)

In sizes 3" (76mm), 4" (101mm), and 6" (168mm), Transair aluminum pipe uses clamshell technology. Place the cartridge on the pipe so it meets the lug. Then position the connector so the cartridge is in the middle. Lastly, close the connector and tighten with the provided bolts.

Installation Video

## 3" ( 76 mm ) • 4" (101mm) • 6" (168mm)

$8^{\prime \prime}$ pipe to pipe connectors can be quickly connected to Transair pipe. Position the seal on one half of the pipe, then slide the 2nd pipe into position. Lastly, attach the connector over the seal and tighten.

## Technical

## Suitable fluids

- compressed air (dry,
wet, lubricated)
- vacuum
- inert gases
- Please consult us for other fluids

## Resistant to

- corrosion- mineral compressor oils
- thermal variations
- synthetic compressor oils
- ultraviolet (UV)
mechanical shocks
compressor oil carry over

## Vacuum level

- 99.9\% (0.03" Hg / 1mbar)

## Working Pressure and Temperature

The maximum working pressure of the Transair ${ }^{\circledR}$ system versus the operating temperature can be seen in the diagram below.

## Maximum Flow

## Sizing Chart

Select the Transair ${ }^{\circledR}$ diameter for your application based on required flow against pressure drop. Estimated values: Closed loop system at 100 PSI with $5 \%$ pressure drop.

## Example <br> $\square$ Main system length <br> (ring main): 1000 ft <br> - Compressor power: 40 hp <br> - Required flow rate: 150 SCFM <br> - Working pressure: 100 PSI <br> Result: The most suitable <br> Transair ${ }^{\oplus}$ diameter is: 1-1/2".

| Flow Rate <br> SCFM | Main Ring Length (ft) |  |  |  |  |  | Compressor hp |

## Rigid Aluminum Pipe

## Product Features:

- Clean air
- Optimum flow rate performance
- Lightweight
- QUALICOAT certified surface finish
- Three colors: blue (RAL 5012/BS1710), gray (RAL 7001), and green (RAL 6029) (other colors: please consult us)
- Suitable fluids: compressed air, vacuum, nitrogen, argon (other fluids: please consult us)
- Extruded pipe (conforms to EN 755.2, EN 755.8 and EN 573.3 standards)

Specifications:
Max. Working
Pressure*:

## Vacuum:

$\qquad$
188** PSI from $-4^{\circ}$ to $+140^{\circ} \mathrm{F}$
( 12.9 bar form $-20^{\circ}$ to $+60^{\circ} \mathrm{C}$ )
232 PSI from $-4^{\circ}$ to $+113^{\circ} \mathrm{F}$
(15.9 bar from $-20^{\circ}$ to $+46.1^{\circ} \mathrm{C}$ )

Working Temperature: $-4^{\circ}$ to $+140^{\circ} \mathrm{F}\left(-20^{\circ}\right.$ to $\left.+60^{\circ} \mathrm{C}\right)$

* Please consult page A5 for higher temperature requirements
${ }^{* *} 188$ psi is the max for 6 inch $(168 \mathrm{~mm})$ and 8 inch ( 220 mm ) diameter pipe. 232 psi is the max for $1 / 2$ inch -4 inch.

## Flexible Hose

## Product Features:

- Compressor outlets (absorption of vibration)
- To bypass obstacles and join different levels
- Expansion loops
- Resistant to mineral and synthetic compressor oils
- Fire resistant (conforms to ISO 8030 standard for compressed air flexible hose)
- Suitable fluids: compressed air

## Specifications:

Use two connectors RR01 to connect flexible hoses FP01 \& FX01 to Transair ${ }^{\oplus}$ pipe.

## Anti Whip-Lash Strap

| PART NO. | USED FOR TRANSAIR HOSE (IN) |
| :--- | :---: |
| 66989903 | $1^{\prime \prime}$ TO 4" $\varnothing$ |
| 66989907 | $6 " \varnothing$ |

Prevents whip-lash should Transair ${ }^{\otimes}$ flexible hose be disconnected while under pressure.

## Pipe-to-Pipe Connectors and Adapters

## Product Features:

- The range of Transair ${ }^{\circledR}$ pipe-to-pipe and stud connectors provides versatility of design and helps to overcome constraints often encountered with the structure of industrial buildings.
- Quick connection

Union Connector - Standard

| PART NO. | OD (IN) | OD (MM) | L (IN) | Z (IN) |

Supplied with brass plug. To drill Transair ${ }^{\oplus}$ pipe, use drilling tools 66980201 and 66980202

## Product Features:

- Optimum flow
- Compact
- Well adapted for most original equipment manufacturer (OEM) applications and for use with neutral gases
- Quick installation without any cutting of pipe

## Quick Assembly Brackets

New generation quick assembly brackets are recommended for vertical or horizontal take-offs, using either rigid pipe or flexible hose.

## Product Features:

- Integral water retention device
- Very high flow
$\square$ Quick installation without any cutting of pipe

Quick Assembly Bracket

| PART NO. | OD1 (IN) | OD1 (MM) | OD2 (IN) | OD2 (MM) | L (IN) | Z1 (IN) | Z2 (IN) |

[^3] and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

## Pressurized System Outlets

Parker Hannifin suggests purging the system prior to installing any drop brackets, but if the system cannot be purged, we suggest the use of a pressurized system (hot tap) bracket. These brackets can only be used for active compressed air lines.

## Product Features:

- Ideal for fast assembly of new pressurized outlets, without venting the compressed air system.
$\square$ The drilling tool can be used with most standard drills.

Pressurized System Bracket

## Wall Brackets

## Product Features:

- 1, 2 or 3 ports
- For wall or machine mounting
- Supplied with brass plugs
- Drain outlet $1 / 4$ "
- Non-flammable (conforms to UL94-HB standard)

Dimensions for all brackets.

## Valves

Transair ${ }^{\circledR}$ ball valves and butterfly valves placed regularly throughout the system at key locations, such as compressor outlets and upstream of pneumatic tools, allow ease of system isolation and pipe reconfiguration / maintenance.

## Product Features:

- Quick connection
- Lockable handles

## Specifications:

Max. Working Pressure* 188 PSI from $-4^{\circ} \mathrm{F}$ to $+140^{\circ} \mathrm{F}$ (12.9 bar form $-20^{\circ}$ to $+60^{\circ} \mathrm{C}$ )

232 PSI from $-4^{\circ} \mathrm{F}$ to $+113^{\circ} \mathrm{F}$
(15.9 bar from $-20^{\circ}$ to $+46.1^{\circ} \mathrm{C}$ )

Vacuum:
98.7\% (29.6" Hg)

Working Temperature: $\quad-4^{\circ}$ to $+140^{\circ} \mathrm{F}\left(-20^{\circ}\right.$ to $\left.+60^{\circ} \mathrm{C}\right)$

* Please consult us for higher temperature requirements

## Tools

## Product Features:

- Practical tools for the installation and extension of Transair ${ }^{\circledR}$ pipe systems.
- Presented in a carrying case or available as separate parts.

## Tool Case

| PART NO. | H (IN) | L (IN) |
| :--- | :---: | :---: |
| 66980005 | $127 / 8$ | $113 / 8$ |

This tool case simplifies the use and transportation of tools. It contains all the tools necessary for completing system installations from 1/2" to 2-1/2":

$\square$ Chamfer tool 66980401 Drill bits 66980201 and 66980202
Cutter for rigid pipe 66980301
Marking tool 66980403
Deburring tool 66980402
Drilling jig 66980103

Pipe Cutter

| PART NO. | USED FOR TRANSAIR ${ }^{\text {}}$ PIPE (IN) |
| :--- | :---: |
| 66980301 | $\varnothing 1 / 2-3$ |
| EW08 0003 | $\varnothing 4-6$ |

$\square$ Includes deburring tool.

## Replacement Cutter Wheels

| PART NO. | USED FOR TRANSAIR PIPE CUTTER |
| :--- | :---: |
| EW080099 | 66980301 |
| EW080004 | EW0800 03 |

## Chamfer Tool

| PART NO. |
| :--- |
| 66980401 |

For $1 / 2^{\prime \prime}, 1^{\prime \prime}$ and $11 / 2^{\prime \prime}$.

Deburring Tool

| PART NO. |
| :--- |
| 66980402 |

Electric Pipe Cutter

| PART NO. | USED FOR TRANSAIR ${ }^{\oplus}$ PIPE (IN) |
| :--- | :---: |
| EW08 00 V 3 | $\varnothing 1-1 / 2$ TO 6 |

Replacement Cutter Blade

\section*{Marking Tool <br> | PART NO. |
| :--- |
| 66980403 |}

The marking tool is used as a guide for marking cut lengths on Transair ${ }^{\circledR}$ pipe. These marks indicate the insertion limits of the pipe into each fitting in order to ensure a good airtight connection and secure grip.

## Spanner Wrenches

| PART NO. |
| :--- |
| 66980503 |

Includes two tightening spanners.
Used to tighten 50 mm and 63 mm connectors.

| PART NO. | USED FOR TRANSAIR PIPE CUTTER |
| :--- | :---: |
| EW08 00 ALUS | EW08 00 V 3 |

Drilling Jig

| PART NO. | USED FOR TRANSAIR PIPE (IN) |
| :--- | :---: |
| 66980101 | $\varnothing 1$ to $1-1 / 2$ |
| 66980103 | $\varnothing 1$ to $2-1 / 2$ |

Drill Bits
$\left.\begin{array}{|l|c|c|c|c|c|c|}\hline \text { PART NO. } & \text { OD1 (IN) } & \text { OD1 (MM) } & \text { OD2 (IN) } & \text { OD2 (MM) } & \text { L (IN) } & \left.\begin{array}{c}\text { USED FOR } \\ \text { TRANSAIR }\end{array}\right) \text { PIPE (IN) }\end{array}\right]$

Drill bit 66980202 is required to install Ø 1" Transair ${ }^{\circledR}$ brackets.
Recommended to be used with any cordless drill with a $1 / 2$ " chuck.
Use with Transair drilling jig, 66980103.

| PART N0. | OD1 (IN) | OD1 (MM) | OD2 (IN) | OD2 (MM) | L (IN) | USED FOR <br> TRANSAIR ${ }^{\text {PIPE }}$ (IN) |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 66980201 | 1 | 22 | $1 / 2$ | 13 | $23 / 4$ | $\varnothing 11 / 2-21 / 2$ |

Drill bit 66980201 is required to install $\varnothing 11 / 2^{\prime \prime}, \varnothing 2^{\prime \prime}$ and $\varnothing 21 / 2^{\prime \prime}$ Transair® brackets. It is also used to create the two holes needed for double-clamp ring connectors when cutting to length $\varnothing 21 / 2^{\prime \prime}$ Transair® pipe. Recommended to be used with any cordless drill with a $1 / 2$ " chuck.
$\left.\begin{array}{|l|c|c|c|c|c|c|}\hline \text { PART NO. } & \text { OD1 (IN) } & \text { OD1 (MM) } & \text { OD2 (IN) } & \text { OD2 (MM) } & \text { L (IN) } & \begin{array}{c}\text { USED FOR } \\ \text { TRANSAIR }\end{array} \\ \hline \text { EIPE (IN) }\end{array}\right]$

Drill bit EW09 is required to install Transair ${ }^{\oplus}$ direct feed brackets.
After drilling, it is important to deburr and clean the pipe.
Recommended to be used with any cordless drill with a $1 / 2$ " chuck.

## Transair ${ }^{\circledR}$ Pipe Hangers

## Product Features:

- Easy adaptation for all pipe work configurations
- For suspension of pipes, from walls, partitions, beams, cable trays, Canalis electrical installations, etc, vertically or horizontally
- Perfectly suited for use with Transair® systems
- Non-flammable (conforms to UL94V-2 standard)
- Transair ${ }^{\oplus}$ pipe hangers are designed to bear a maximum WT of 44 lbs . However, to ensure good stability of the system, we recommend the use of at least two hangers per pipe i.e.:
$\square$ Maximum 5 ft space between hangers for 9 ft lengths of pipe
Maximum 10 ft space between hangers for 20 ft lengths of pipe
- Only use Transair ${ }^{\circledR}$ pipe hangers for hanging Transair aluminum pipe. Use of non-Transair hangers will void the warranty. All hangers should be fixed to a rigid support to allow for expansion and contraction.

Pipe Hangers

| PART NO. | OD (IN) | OD (MM) | THD SIZE (IN) | L (IN) | H (IN) | H1 (IN) | K (IN) |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Composite Automatic Safety Couplers

Parker Transair's quick-acting safety couplers have been designed for the safety of the operator, while maintaining superior performance. With two standard profiles, Transair safety couplers are ideal for any installation.

## Product Features:

- Prevents risk of whiplash
- Quick-acting vent for safe and fast disconnection
- Constructed from impact-resistant material
- High flow rates with minimum pressure drop
- ISO 4414 and EN 983 safety standard compliant
$\square$ Suitable media: Compressed air, argon, nitrogen (please contact us for other medias)

## Specifications:

Max. Working 232 PSI (15.9 bar)
Pressure:
Working Temperature: $\quad-4^{\circ}$ to $+140^{\circ} \mathrm{F}\left(-20^{\circ}\right.$ to $\left.+60^{\circ} \mathrm{C}\right)$

Operation

Connecting the probe
The sleeve does not need to be rotated to connect the probe.

## Disconnecting the probe

Rotation, arrow 1: circuit vented on probe side.
Rotation, arrow 2: probe disconnected from the body.

## Venting Time

ISO B6 profile, recoil tubing (I.D. $6 \mathbf{m m}$, length $\mathbf{2 0}$ feet)
Venting time $=350 \mathrm{~ms}$ (transition from 87 psi to 3psi) ISO B8 profile, PVC tubing (I.D. 10 mm , length $\mathbf{8 2}$ feet)
Venting time $=860 \mathrm{~ms}$ (transition from 87 psi to 3psi)
Even with longer lengths of tubing, the vent time of the C9000 coupler can be less than 1 second.

[^8] and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov

## Transair 316L Stainless Steel Drops

Transair 316L drops are the ideal solutions for compressed air and vacuum applications in demanding environments. We offer an array of $3 / 4$ " push to connect components to customize the drop to the point of use needs. Transair 316L drops can integrate into existing Transair aluminum or stainless steel systems.

These modular components are easy to clean and offer a high chemical resistance. Since these components comply with FDA-CFR21 requirements, Transair 316L drops can be used in areas where components are constantly in contact with food or beverages.

Technical Specifications

## Product Features

$\square$ Push to connect connections

- Full bore design
$\square$ Modular and reusable
- Optimizes cleaning and maintenance operations
- Large chemical compatibility (see chemical compatibility chart)
$\square$ Connectors individually packaged in sealed plastic bags.

## Instructions for Assembly and Disassembly of a Stainless Steel Drop

Assembly: simply push the pipe into the fitting.

Disassembly : 3. Pull the pipe from the fitting.

Disassembly: 1. Manually unscrew the nut and slide the nut along the pipe.

Disassembly: 4. Manually unscrew the nut and remove the red dismounting ring.

Disassembly : 2. Put the red dismounting ring on the pipe and re-screw the nut on the fitting.

Disassembly: 5. Re-screw the nut on the fitting without the red ring; it is ready for assembly.

These components can quickly and easily connect to existing Transair aluminum or stainless steel systems with threaded drop brackets.

## Pneumatic Lockout Valves

## Features:

■ Used for compliance with OSHA 29 CFR part 1910

- 1/2" to 2 " NPT pipe sizes
- Yellow cast aluminum body with red handle
- Inline or surface mountable
- Built in port for pressure verification to meet

ANSI B11 and PMMI B155 requirements

## Material Specifications:

- Robust but lightweight aluminum construction
- Secondary pressure ranges 0-30 PSIG (0-2 bar), 0-60 PSIG ( $0-4$ bar), 0-125 PSIG (0-8 bar), 0-250 PSIG (0-17 bar)
- Secondary aspiration plus balanced poppet provides quick response and accurate pressure regulation
- Relieving
- Non-rising knob

## Material Specifications:

Body
Adjustment Knob
Body Cap ABS

## चAant

Transair ${ }^{\ominus}$ Stainless Steel Range

## Technical Specifications

## Compatible Media

Process water
Media additives (i.e. Glycol or inhibitors) to prevent freezing or the formation of algae and fungus (contact us for full list)
Lubricating oils

Compressed air (dry, wet, lubricated)
Vacuum
Industrial/Inert Gases (argon, nitrogen)
For an expanded list of compatible media, read our chemical compatibility chart on page E

Maximum Working Pressure According to the Temperature

## Working Pressure

145 psi from $14^{\circ} \mathrm{F}$ to $140^{\circ} \mathrm{F}$
100 psi from $14^{\circ} \mathrm{F}$ to $194^{\circ} \mathrm{F}$

## Expansion Coefficient

Expansion coefficient of Transair® stainless steel pipe: 0.016 mm per metre per degree celcius

## Resistance

to corrosion
to aggressive environments
to mechanical shocks
All Transair materials are 100\% recyclable!

## Water Hammer

Ø3/4, Ø1: comply with standard BS, 7291 part 1
Ø1-1/2, Ø2, Ø3, Ø4: comply with standard NF T54-091

## Sizing and Selection

Select the Transair ${ }^{\circledR}$ diameter for your application, based on required flow against pressure drop.
Estimated values for a closed loop network, a pressure of 58 psi with less than $10 \%$ pressure drop.
Velocity: $13 \mathrm{ft} / \mathrm{s}$.

| ESTIMATED FLOW RATE |  |  |  | EQUIVALENT LENGTH |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

* When designing a process water system, take these results in conjunction with system design best practice. An anti water hammer device is necessary for the protection of highly sensitive equipment.

## Example (with the above values)

Main System Linear Length (Closed Loop): 164ft
Required Flow Rate: 9cfm
Working Pressure: 58psi

Pressure Drop < 10\%
Velocity: $13.1 \mathrm{ft} / \mathrm{s}$
The most suitable Transair Stainless
Steel Diameter is: 60 mm (2")

## Transair ${ }^{\circledR}$ Standards and Certifications

The certifications for Parker Transair's Stainless Steel range fall within the list identified on pages 2 and 3 of this catalog.

## Standards Related to Transair ${ }^{\bullet}$ Stainless Steel Pipe

The Transair stainless steel range conforms to the manufacturing
 and chemical compatibility standards listed below.

|  | ø 3/4-ø 1 | $\varnothing 1-1 / 2-\varnothing 2$ | ø $3-\varnothing 4$ |
| :---: | :---: | :---: | :---: |
| MANUFACTURING STANDARDS | EN 10217-7 | EN 10217-7 | EN 10217-7 |
| GRADE | EN 10088-2, 4404, AISI 316L | 1.4301 / AISI 304 | 1.4301 / AISI 304 |
| WELDING STANDARD | DIN 17 457, EN 10217-7 | DIN 17 457, EN 10217-7 | DIN 17457, EN 10217-7 |
| TOLERANCES | DVGW - W541 | EN 1127D4/T3 | EN 1127D4/T3 |

The quality of the raw materials used in Transair stainless steel pipes allows for them to be bent according to best practices.

## Applications

## FDA Certificate - CFR 21

The Transair 316L stainless steel drop components conform to the requirements found in FDA - CFR 21.

## Safety

## UL94 HB Grade Certificate

All Transair ${ }^{\circledR}$ components are non-flammable with no propagation of flame.
Pipe-to-pipe connectors, ball valves and butterfly valves conform to UL 94 HB Grade standards.

[^17]
## Transair ${ }^{\oplus}$ Connection Technologies

Transair's innovative technology enables rapid and easy assembly with quick connection of components to the stainless steel pipe. This technology takes into account the specific requirements of each diameter and provides the user with an optimum safety coefficient and easy connection.

## 3/4" (22mm) • 1" ( 28 mm )

In sizes 3/4" (22mm), and 1" (28mm), Transair stainless steel pipe uses push to connect technology. Simply push the pipe into the connector until it meets the depth mark on the pipe. The gripping ring will then engage and prevent the pipe from sliding out of the connector.

## 1-1/2" ( 42 mm ) • 2" ( 60 mm )

In sizes 1-1/2" (42mm) and 2" ( 60 mm ), Transair stainless steel pipe uses clamp ring technology. Use a lugging tool to lug the pipe, then place the clamp ring over the lugs and slide the nut into place. Lastly, use a pare of spanner wrenches to fully tighten the connector.

## 3" (76mm) • 4" (101mm)

In sizes 3" (76mm), and 4" (101mm), Transair stainless steel pipe uses clamshell technology. Place the cartridge on the pipe so it meets the lug. Then position the connector so the cartridge is in the middle. Lastly, close the connector and tighten with the provided bolts.

## Pipe-to-Pipe Connectors for Stainless Steel

The range of Transair ${ }^{\circledR}$ pipe-to-pipe and stud connectors provides versatility of design.

- Quick connection
- Dismountable and reusable
- Full bore design (consistent inner diameter for both pipe and connectors)

Union Connector

## Tools for Stainless Steel

Pipe Cutter

| PART NO. | USED FOR TRANSAIR ${ }^{\text {® }}$ PIPE (IN) |
| :--- | :---: |
| 66980301 | $\varnothing 3 / 4$ TO 3 |
| EW08 0003 | $\varnothing 4$ |

$\square$ Includes deburring tool.

## Spanner Wrenches

| PART NO. | 66980503 |
| :--- | :--- |

Includes two tightening spanners.
Used to tighten 1-1/2" and 2 " connectors.

Deburring Tool

| PART NO. | 66980402 |
| :--- | :---: |

Portable Lugging Tool Kit

| PART NO. | VOLTAGE |
| :--- | :---: |
| EW01 0002 | 14 |

This case contains: one portable tool, one 14 V battery and battery charger. Jaws sold separately.

Drilling Tool

| PART NO. | OD1 <br> (IN) | OD1 <br> (MM) | OD2 <br> (IN) | OD2 <br> (MM) | L (IN) | USED FOR <br> TRANSAIR ${ }^{\text {P PIPE (IN) }}$ |

# Parker Safety Guide for Selecting and Using Hose, Tubing, Fittings, Connectors, Conductors, Valves and Related Accessories <br> Parker Publication No. 4400-B. 1 

WARNING: Failure or improper selection or improper use of hose, tubing, fittings, assemblies, valves, connectors, conductors or related accessories ("Products") can cause death, personal injury and property damage. Possible consequences of failure or improper selection or improper use of these Products include but are not limited to:

- Fittings thrown off at high speed.

High velocity fluid discharge.

- Explosion or burning of the conveyed fluid.
- Electrocution from high voltage electric powerlines.
- Contact with suddenly moving or falling objects
that are controlled by the conveyed fluid.
- Injections by high-pressure fluid discharge.
- Dangerously whipping Hose.

Tube or pipe burst.
Weld joint fracture.
Contact with conveyed fluids that may be hot, cold, toxic or otherwise injurious.
Sparking or explosion caused by static electricity buildup or other sources of electricity.
Sparking or explosion while spraying paint or flammable liquids.
Injuries resulting from inhalation, ingestion or exposure to fluids.

Before selecting or using any of these Products, it is important that you read and follow the instructions below. No product from any division in Fluid Connector Group is approved for in-flight aerospace applications. For hoses and fittings used in in-flight aerospace applications, please contact Parker Aerospace Group

## GENERAL INSTRUCTIONS

1.0 Scope: This safety guide provides instructions for selecting and using (including assembling, installing, and maintaining) these Products. For convenience, all rubber and/or thermoplastic products commonly called "hose" or "tubing" are called "Hose" in this safety guide. Metallic tube or pipe are called "tube". All assemblies made with Hose are called "Hose Assemblies". All assemblies made with Tube are called "Tube Assemblies". All products commonly called "fittings", "couplings" or "adapters" are called "Fittings". Valves are fluid system components that control the passage of fluid. Related accessories are ancillary devices that enhance or monitor performance including crimping, flaring, flanging, presetting, bending, cutting, deburring, swaging machines, sensors, tags, lockout handles, spring guards and associated tooling. This safety guide is a supplement to and is to be used with the specific Parker publications for the specific Hose, Fittings and Related Accessories that are being considered for use. Parker publications are available at www. parker. com. SAE J1273 (www.sae.org) and ISO 17165-2 (www.ansi.org) also provide recommended practices for hydraulic Hose Assemblies, and should be followed.
1.1 Fail-Safe: Hose, Hose Assemblies, Tube, Tube Assemblies and Fittings can and do fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of the Hose, Hose Assembly, Tube, Tube Assembly or Fitting will not endanger persons or property.
1.2 Distribution: Provide a copy of this safety guide to each person responsible for selecting or using Hose, Tube and Fitting products. Do not select or use Parker Hose, Tube or Fittings without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the Products.
1.3 User Responsibility: Due to the wide variety of operating conditions and applications for Hose, Tube and Fittings. Parker does not represent or warrant that any particular Hose, Tube or Fitting is suitable for any specific end use system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:
$\bullet$ Making the final selection of the Products.

- Assuring that the user's requirements are met and that the application presents no health or safety hazards.
- Following the safety guide for Related Accessories and being trained to operate Related Accessories.
- Providing all appropriate health and safety warnings on the equipment on which the Products are used.
- Assuring compliance with all applicable government and industry standards. 1.4 Additional Questions: Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the Products being considered or used, or call 1-800-CPARKER, or go to www.parker.com, for telephone numbers of the appropriate technical service department.

### 2.0 HOSE, TUBE AND FITTINGS SELECTION INSTRUCTIONS

2.1 Electrical Conductivity: Certain applications require that the Hose be nonconductive to prevent electrical current flow. Other applications require the Hose and the Fittings and the Hose/Fitting interface to be sufficiently conductive to drain off static electricity. Extreme care must be exercised when selecting Hose, Tube and Fittings for these or any other applications in which electrical conductivity or nonconductivity is a factor.
The electrical conductivity or nonconductivity of Hose, Tube and Fittings is dependent upon many factors and may be susceptible to change. These factors include but are not limited to the various materials used to make the Hose and the Fittings, Fitting finish (some Fitting finishes are electrically conductive while others are nonconductive), manufacturing methods (including moisture control), how the Fittings contact the Hose, age and amount of deterioration or damage or other changes, moisture content of the Hose at any particular time, and other factors.
The following are considerations for electrically nonconductive and conductive Hose. For other applications consult the individual catalog pages and the appropriate industry or regulatory standards for proper selection.
2.1.1 Electrically Nonconductive Hose: Certain applications require that the

Hose be nonconductive to prevent electrical current flow or to maintain electrical isolation. For applications that require Hose to be electrically nonconductive, including but not limited to applications near high voltage electric lines, only special nonconductive Hose can be used. The manufacturer of the equipment in which the nonconductive Hose is to be used must be consulted to be certain that the Hose, Tube and Fittings that are selected are proper for the application. Do not use any Parker Hose or Fittings for any such application requiring nonconductive Hose, including but not limited to applications near high voltage electric lines or dense magnetic fields, unless (i) the application is expressly approved in the Parker technical publication for the product, (ii) the Hose is marked "nonconductive", and (iii) the manufacturer of the equipment on which the Hose is to be used specifically approves the particular Parker Hose, Tube and Fittings for such use.
2.1.2 Electrically Conductive Hose: Parker manufactures special Hose for certain applications that require electrically conductive Hose. Parker manufactures special Hose for conveying paint in airless paint spraying applications. This Hose is labeled "Electrically Conductive Airless Paint Spray Hose" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate dangerous static charge buildup, which occurs in all airless paint spraying applications. Do not use any other Hose for airless paint spraying, even if electrically conductive. Use of any other Hose or failure to properly connect the Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. All hoses that convey fuels must be grounded. Parker manufactures a special Hose for certain compressed natural gas ("CNG") applications where static electricity buildup may occur. Parker CNG Hose assemblies comply with the requirements of ANSI/ IAS NGV 4.2; CSA 12.52, "Hoses for Natural Gas Vehicles and Dispensing Systems" (www.ansi.org). This Hose is labeled "Electrically Conductive for CNG Use" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate dangerous static charge buildup, which occurs in, for example, high velocity CNG dispensing or transfer. Do not use any other Hose for CNG applications where static charge buildup may occur, even if electrically conductive. Use of other Hoses in CNG applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. Care must also be taken to protect against CNG permeation through the Hose wall. See section 2.6, Permeation, for more information. Parker CNG Hose is intended for dispenser and vehicle use within the specified temperature range. Parker CNG Hose should not be used in confined spaces or unventilated areas or areas exceeding the specified temperature range. Final assemblies must be tested for leaks. CNG Hose Assemblies should be tested on a monthly basis for conductivity per ANSI/IAS NGV 4.2; CSA 12.52. Parker manufactures special Hose for aerospace in-flight applications. Aerospace in-flight applications employing Hose to transmit fuel, lubricating fluids and hydraulic fluids require a special Hose with a conductive inner tube. This Hose for in-flight applications is available only from Parker's Stratoflex Products Division. Do not use any other Parker Hose for in-flight applications, even if electrically conductive. Use of other Hoses for in-flight applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury and property damage. These Hose assemblies for in-flight applications must meet all applicable aerospace industry, aircraft engine and aircraft requirements.
2.2 Pressure: Hose, Tube and Fitting selection must be made so that the published maximum working pressure of the Hose, Tube and Fittings are equal to or greater than the maximum system pressure. The maximum working pressure of a Hose, or Tube Assembly is the lower of the respective published maximum working pressures of the Hose, Tube and the Fittings used. Surge pressures or peak transient pressures in the system must be below the published maximum working pressure for the Hose, Tube and Fitting. Surge pressures and peak pressures can usually only be determined by sensitive electrical instrumentation that measures and indicates pressures at millisecond intervals. Mechanical pressure gauges indicate only average pressures and cannot be used to
determine surge pressures or peak transient pressures. Published burst pressure ratings for Hose is for manufacturing test purposes only and is no indication that the Product can be used in applications at the burst pressure or otherwise above the published maximum recommended working pressure.
2.3 Suction: Hoses used for suction applications must be selected to insure that the Hose will withstand the vacuum and pressure of the system. Improperly selected Hose may collapse in suction application.
2.4 Temperature: Be certain that fluid and ambient temperatures, both steady and transient, do not exceed the limitations of the Hose, Tube, Fitting and Seals. Temperatures below and above the recommended limit can degrade Hose, Tube, Fittings and Seals to a point where a failure may occur and release fluid. Tube and Fittings performances are normally degraded at elevated temperature. Material compatibility can also change at temperatures outside of the rated range. Properly insulate and protect the Hose Assembly when routing near hot objects (e.g. manifolds). Do not use any Hose in any application where failure of the Hose could result in the conveyed fluids (or vapors or mist from the conveyed fluids) contacting any open flame, molten metal, or other potential fire ignition source that could cause burning or explosion of the conveyed fluids or vapors.
2.5 Fluid Compatibility: Hose, and Tube Assembly selection must assure compatibility of the Hose tube, cover, reinforcement, Tube, Plating and Seals with the fluid media used. See the fluid compatibility chart in the Parker publication for the product being considered or used. This information is offered only as a guide. Actual service life can only be determined by the end user by testing under all extreme conditions and other analysis. Hose, and Tube that is chemically compatible with a particular fluid must be assembled using Fittings and adapters containing likewise compatible seals. Flange or flare processes can change Tube material properties that may not be compatible with certain requirements such as NACE
2.6 Permeation: Permeation (that is, seepage through the Hose or Seal) will occur from inside the Hose or Fitting to outside when Hose or Fitting is used with gases, liquid and gas fuels, and refrigerants (including but not limited to such materials as helium, diesel fuel, gasoline, natural gas, or LPG). This permeation may result in high concentrations of vapors which are potentially flammable, explosive, or toxic, and in loss of fluid. Dangerous explosions, fires, and other hazards can result when using the wrong Hose for such applications. The system designer must take into account the fact that this permeation will take place and must not use Hose or Fitting if this permeation could be hazardous. The system designer must take into account all legal, government, insurance, or any other special regulations which govern the use of fuels and refrigerants. Never use a Hose or Fitting even though the fluid compatibility is acceptable without considering the potential hazardous effects that can result from permeation through the Hose or Tube Assembly. Permeation of moisture from outside the Hose or Fitting to inside the Hose or Fitting will also occur in Hose or Tube assemblies, regardless of internal pressure. If this moisture permeation would have detrimental effects (particularly, but not limited to refrigeration and air conditioning systems), incorporation of sufficient drying capacity in the system or other appropriate system safeguards should be selected and used. The sudden pressure release of highly pressurized gas could also result in Explosive Decompression failure of permeated Seals and Hoses.
2.7 Size: Transmission of power by means of pressurized fluid varies with pressure and rate of flow. The size of the components must be adequate to keep pressure losses to a minimum and avoid damage due to heat generation or excessive fluid velocity.
2.8 Routing: Attention must be given to optimum routing to minimize inherent problems (kinking or flow restriction due to Hose collapse, twisting of the Hose, proximity to hot objects or heat sources). For additional routing recommendations see SAE J1273 and ISO 17165-2. Hose Assemblies have a finite life and should be installed in a manner that allows for ease of inspection and future replacement. Hose because of its relative short life, should not be used in residential and commercial buildings inside of inaccessible walls or floors, unless specifically allowed in the product literature. Always review all product literature for proper installation and routing instructions.
2.9 Environment: Care must be taken to insure that the Hose, Tube and Fittings are either compatible with or protected from the environment (that is, surrounding conditions) to which they are exposed. Environmental conditions including but not limited to ultraviolet radiation, sunlight, heat, ozone, moisture, water, salt water, chemicals and air pollutants can cause degradation and premature failure.
2.10 Mechanical Loads: External forces can significantly reduce Hose, Tube and Fitting life or cause failure. Mechanical loads which must be considered include excessive flexing, twist, kinking, tensile or side loads, bend radius, and vibration. Use of swivel type Fittings or adapters may be required to insure no twist is put into the Hose. Use of proper Hose or Tube clamps may also be required to reduce external mechanical loads. Unusual applications may require special testing prior to Hose selection.
2.11 Physical Damage: Care must be taken to protect Hose from wear, snagging, kinking, bending smaller that minimum bend radius and cutting, any of which can cause premature Hose failure. Any Hose that has been kinked or bent to a radius smaller than the minimum bend radius, and any Hose that has been cut or is cracked or is otherwise damaged should be removed and discarded. Fittings with damages such as scratches on sealing surfaces and deformation should be replaced.
2.12 Proper End Fitting: See instructions 3.2 through 3.5. These recommendations may be substantiated by testing to industry standards such as SAE J517 for hydraulic applications, or MIL-A-5070, AS1339, or AS3517 for Hoses from Parker's Stratoflex Products Division for aerospace applications.
2.13 Length: When determining the proper Hose or Tube length of an assembly, be aware of Hose length change due to pressure, Tube length change due to thermal expansion or contraction, and Hose or Tube and machine tolerances and movement must be considered. When routing short hose assemblies, it is recommended that the minimum free hose length is always used. Consult the hose manufacturer for their minimum free hose length recommendations.

Hose assemblies should be installed in such a way that any motion or flexing occurs within the same plane.
2.14 Specifications and Standards: When selecting Hose, Tube and Fittings, government, industry, and Parker specifications and recommendations must be reviewed and followed as applicable.
2.15 Hose Cleanliness: Hose and Tube components may vary in cleanliness levels. Care must be taken to insure that the Hose and Tube Assembly selected has an adequate level of cleanliness for the application.
2.16 Fire Resistant Fluids: Some fire resistant fluids that are to be conveyed by Hose or Tube require use of the same type of Hose or Tube as used with petroleum base fluids. Some such fluids require a special Hose, Tube, Fitting and Seal, while a few fluids will not work with any Hose at all. See instructions 2.5 and 1.5. The wrong Hose, Tube, Fitting or Seal may fail after a very short service. In addition, all liquids but pure water may burn fiercely under certain conditions, and even pure water leakage may be hazardous.
2.17 Radiant Heat: Hose and Seals can be heated to destruction without contact by such nearby items as hot manifolds or molten metal. The same heat source may then initiate a fire. This can occur despite the presence of cool air around the Hose or Seal. Performance of Tube and Fitting subjected to the heat could be degraded.
2.18 Welding or Brazing: When using a torch or arc welder in close proximity to hydraulic lines, the hydraulic lines should be removed or shielded with appropriate fire resistant materials. Flame or weld spatter could burn through the Hose or Seal and possibly ignite escaping fluid resulting in a cat tastrophic failure. Heating of plated parts, including Hose Fittings and adapters, above $450^{\circ} \mathrm{F}\left(232^{\circ} \mathrm{C}\right)$ such as during welding, brazing or soldering may emit deadly gases. Any elastomer seal on fittings shall be removed prior to welding or brazing, any metallic surfaces shall be protected after brazing or welding when necessary. Welding and brazing filler material shall be compatible with the Tube and Fitting that are joined.
2.19 Atomic Radiation: Atomic radiation affects all materials used in Hose and Tube assemblies. Since the long-term effects may be unknown, do not expose Hose or Tube assemblies to atomic radiation. Nuclear applications may require special Tube and Fittings.
2.20 Aerospace Applications: The only Hose, Tube and Fittings that may be used for in-flight aerospace applications are those available from Parker's Stratoflex Products Division. Do not use any other Hose or Fittings for in-flight applications. Do not use any Hose or Fittings from Parker's Stratoflex Products Division with any other Hose or Fittings, unless expressly approved in writing by the engineering manager or chief engineer of Stratoflex Products Division and verified by the user's own testing and inspection to aerospace industry standards.
2.21 Unlocking Couplings: Ball locking couplings or other Fittings with quick disconnect ability can unintentionally disconnect if they are dragged over obstructions, or if the sleeve or other disconnect member, is bumped or moved enough to cause disconnect. Threaded Fittings should be considered where there is a potential for accidental uncoupling.

### 3.0 HOSE AND FITTINGS ASSEMBLY AND INSTALLATION INSTRUCTIONS

3.1 Component Inspection: Prior to assembly, a careful examination of the Hose and Fittings must be performed. All components must be checked for correct style, size, catalog number, and length. The Hose must be examined for cleanliness, obstructions, blisters, cover looseness, kinks, cracks, cuts or any
other visible defects. Inspect the Fitting and sealing surfaces for burrs, nicks, other visible defects. Inspect the Fitting and sealing surfaces for burrs, nicks, corrosion or other imperfections. Do NOT use any component that displays any signs of nonconformance.
3.2 Hose and Fitting Assembly: Do not assemble a Parker Fitting on a Parker Hose that is not specifically listed by Parker for that Fitting, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. Do not assemble a Parker Fitting on another manufacturer's Hose or a Parker Hose on another manufacturer's Fitting unless (i) the engineering manager or chief engineer of the appropriate Parker division approves the Assembly in writing or that combination is expressly approved in the appropriate Parker literature for the specific Parker product, and (ii) the user verifies the Assembly and the application through analysis and testing. For Parker Hose that does not specify a Parker Fitting, the user is solely responsible for the selection of the proper Fitting and Hose Assembly procedures. See instruction 1.4. To prevent the possibility of problems such as leakage at the Fitting or system contamination, it is important to completely remove all debris from the cutting operation before installation of the Fittings. The Parker published instructions must be followed for assembling the Fittings on the Hose. These instructions are provided in the Parker Fitting catalog for the specific Parker Fitting being used, or by calling 1-800-CPARKER, or at www.parker.com.
3.3 Related Accessories: Do not crimp or swage any Parker Hose or Fitting with anything but the listed swage or crimp machine and dies in accordance with Parker published instructions. Do not crimp or swage another manufacturer's Fitting with a Parker crimp or swage die unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.
3.4 Parts: Do not use any Parker Fitting part (including but not limited to socket, shell, nipple, or insert) except with the correct Parker mating parts, in accordance with Parker published instructions, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.
3.5 Field Attachable/Permanent: Do not reuse any field attachable Hose Fitting that has blown or pulled off a Hose. Do not reuse a Parker permanent Hose Fitting (crimped or swaged) or any part thereof. Complete Hose Assemblies may only be reused after proper inspection under section 4.0. Do not assemble Fittings to any previously used hydraulic Hose that was in service, for use in a fluid power application.
3.6 Pre-Installation Inspection: Prior to installation, a careful examination of the Hose Assembly must be performed. Inspect the Hose Assembly for any damage or defects. DO NOT use any Hose Assembly that displays any signs
of nonconformance
3.7 Minimum Bend Radius: Installation of a Hose at less than the minimum listed bend radius may significantly reduce the Hose life. Particular attention must be given to preclude sharp bending at the Hose to Fitting juncture. Any bending during installation at less than the minimum bend radius must be avoided. If any Hose is kinked during installation, the Hose must be discarded.
3.8 Twist Angle and Orientation: Hose Assembly installation must be such that relative motion of machine components does not produce twisting.
3.9 Securement: In many applications, it may be necessary to restrain, protect, or guide the Hose to protect it from damage by unnecessary flexing, pressure surges, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.
3.10 Proper Connection of Ports: Proper physical installation of the Hose Assembly requires a correctly installed port connection insuring that no twist or torque is transferred to the Hose when the Fittings are being tightened or otherwise during use.
3.11 External Damage: Proper installation is not complete without insuring that tensile loads, side loads, kinking, flattening, potential abrasion, thread damage or damage to sealing surfaces are corrected or eliminated. See instruction 2.10.
3.12 System Checkout: All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Hose maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potential hazardous areas while testing and using.
3.13 Routing: The Hose Assembly should be routed in such a manner so if a failure does occur, the escaping media will not cause personal injury or property damage. In addition, if fluid media comes in contact with hot surfaces, open flame or sparks, a fire or explosion may occur. See section 2.4.
3.14 Ground Fault Equipment Protection Devices (GFEPDs): WARNING! Fire and Shock Hazard. To minimize the danger of fire if the heating cable of a Multitube bundle is damaged or improperly installed, use a Ground Fault Equipment Protection Device. Electrical fault currents may be insufficient to trip a conventional circuit breaker. For ground fault protection, the IEEE 515: (www. ansi.org) standard for heating cables recommends the use of GFEPDs with a nominal 30 milliampere trip level for "piping systems in classified areas, those areas requiring a high degree of maintenance, or which may be exposed to physical abuse or corrosive atmospheres".
4.0 TUBE AND FITTINGS ASSEMBLY AND INSTALLATION INSTRUCTIONS
4.1 Component Inspection: Prior to assembly, a careful examination of the Tube and Fittings must be performed. All components must be checked for correct style, size, material, seal, and length. Inspect the Fitting and sealing surfaces for burrs, nicks, corrosion, missing seal or other imperfections. Do NOT use any component that displays any signs of nonconformance.
4.2 Tube and Fitting Assembly: Do not assemble a Parker Fitting with a Tube that is not specifically listed by Parker for that Fitting, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. The Tube must meet the requirements specified to the Fitting. The Parker published instructions must be followed for assembling the Fittings to a Tube. These instructions are provided in the Parker Fitting catalog for the specific Parker Fitting being used, or by calling 1-800-CPARKER, or at www. parker.com.
4.3 Related Accessories: Do not preset or flange Parker Fitting components using another manufacturer's equipment or procedures unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. Tube, Fitting component and tooling must be check for correct style, size and material. Operation and maintenance of Related Accessories must be in accordance with the operation manual for the designated Accessory.
4.4 Securement: In many applications, it may be necessary to restrain, protect, or guide the Tube to protect it from damage by unnecessary flexing, pressure surges, vibration, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.
4.5 Proper Connection of Ports: Proper physical installation of the Tube Assembly requires a correctly installed port connection insuring that no torque is transferred to the Tube when the Fittings are being tightened or otherwise during use.
4.6 External Damage: Proper installation is not complete without insuring that tensile loads, side loads, flattening, potential abrasion, thread damage or damage to sealing surfaces are corrected or eliminated. See instruction 2.10.
4.7 System Checkout: All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Tube Assembly maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potential hazardous areas while testing and using.
4.8 Routing: The Tube Assembly should be routed in such a manner so if a failure does occur, the escaping media will not cause personal injury or property damage. In addition, if fluid media comes in contact with hot surfaces, open flame or sparks, a fire or explosion may occur. See section 2.4.

### 5.0 HOSE AND FITTING MAINTENANCE AND REPLACEMENT INSTRUCTIONS

5.1 Even with proper selection and installation, Hose life may be significantly reduced without a continuing maintenance program. The severity of the application, risk potential from a possible Hose failure, and experience with any Hose failures in the application or in similar applications should determine the frequency of the inspection and the replacement for the Products so that Products are replaced before any failure occurs. Certain products require maintenance and inspection per industry requirements. Failure to adhere to these requirements may lead to premature failure. A maintenance program must be established and followed by the user and, at minimum, must include instructions 5.2 through 5.7
5.2 Visual Inspection Hose/Fitting: Any of the following conditions require immediate shut down and replacement of the Hose Assembly:

- Fitting slippage on Hose;
- Damaged, cracked, cut or abraded cover (any reinforcement exposed);
- Hard, stiff, heat cracked, or charred Hose;
- Cracked, damaged, or badly corroded Fittings;
- Leaks at Fitting or in Hose;
- Kinked, crushed, flattened or twisted Hose; and
- Blistered, soft, degraded, or loose cover.
5.3 Visual Inspection All Other: The following items must be tightened, repaired, corrected or replaced as required:
- Leaking port conditions;
- Excess dirt buildup;
- Worn clamps, guards or shields; and
- System fluid level, fluid type, and any air entrapment.
5.4 Functional Test: Operate the system at maximum operating pressure and check for possible malfunctions and leaks. Personnel must avoid potential hazardous areas while testing and using the system. See section 2.2.
5.5 Replacement Intervals: Hose assemblies and elastomeric seals used on Hose Fittings and adapters will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Hose Assemblies and elastomeric seals should be inspected and replaced at specific replacement intervals, based on previous service life, government or industry recommendations, or when failures could result in unacceptable downtime, damage, or injury risk. See section 1.2. Hose and Fittings may be subjected to internal mechanical and/ or chemical wear from the conveying fluid and may fail without warning. The user must determine the product life under such circumstances by testing. Also see section 2.5.
5.6 Hose Inspection and Failure: Hydraulic power is accomplished by utilizing high pressure fluids to transfer energy and do work. Hoses, Fittings and Hose Assemblies all contribute to this by transmitting fluids at high pressures. Fluids under pressure can be dangerous and potentially lethal and, therefore, extreme caution must be exercised when working with fluids under pressure and handling the Hoses transporting the fluids. From time to time, Hose Assemblies will fail if they are not replaced at proper time intervals. Usually these failures are the result of some form of misapplication, abuse, wear or failure to perform proper maintenance. When Hoses fail, generally the high pressure fluids inside escape in a stream which may or may not be visible to the user. Under no circumstances should the user attempt to locate the leak by "feeling" with their hands or any other part of their body. High pressure fluids can and will penetrate the skin and cause severe tissue damage and possibly loss of limb. Even seemingly minor hydraulic fluid injection injuries must be treated immediately by a physician with knowledge of the tissue damaging properties of hydraulic fluid. If a Hose failure occurs, immediately shut down the equipment and leave the area until pressure has been completely released from the Hose Assembly. Simply shutting down the hydraulic pump may or may not eliminate the pressure in the Hose Assembly. Many times check valves, etc., are employed in a system and can cause pressure to remain in a Hose Assembly even when pumps or equipment are not operating. Tiny holes in the Hose, commonly known as pinholes, can eject small, dangerously powerful but hard to see streams of hydraulic fluid. It may take several minutes or even hours for the pressure to be relieved so that the Hose Assembly may be examined safely. Once the pressure has been reduced to zero, the Hose Assembly may be taken off the equipment and examined. It must always be replaced if a failure has occurred. Never attempt to patch or repair a Hose Assembly that has failed. Consult the nearest Parker distributor or the appropriate Parker division for Hose Assembly replacement information. Never touch or examine a failed Hose Assembly unless it is obvious that the Hose no longer contains fluid under pressure. The high pressure fluid is extremely dangerous and can cause serious and potentially fatal injury.
5.7 Elastomeric seals: Elastomeric seals will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Elastomeric seals should be inspected and replaced.
5.8 Refrigerant gases: Special care should be taken when working with refrigeration systems. Sudden escape of refrigerant gases can cause blindness if the escaping gases contact the eye and can cause freezing or other severe injuries if it contacts any other portion of the body.
5.9 Compressed natural gas (CNG): Parker CNG Hose Assemblies should be tested after installation and before use, and at least on a monthly basis per instructions provided on the Hose Assembly tag. The recommended procedure is to pressurize the Hose and check for leaks and to visually inspect the Hose for damage and to perform an electrical resistance test. Caution: Matches, candles, open flame or other sources of ignition shall not be used for Hose inspection. Leak check solutions should be rinsed off after use.

### 6.0 HOSE STORAGE

6.1 Age Control: Hose and Hose Assemblies must be stored in a manner that facilitates age control and first-in and first-out usage based on manufacturing date of the Hose and Hose Assemblies. Unless otherwise specified by the manufacturer or defined by local laws and regulations:
6.1.1 The shelf life of rubber hose in bulk form or hose made from two or more materials is 28 quarters ( 7 years) from the date of manufacture, with an extension of 12 quarters ( 3 years), if stored in accordance with ISO 2230;
6.1.2 The shelf life of thermoplastic and polytetrafluoroethylene hose is considered to be unlimited;
6.1.3 Hose assemblies that pass visual inspection and proof test shall not be stored for longer than 2 years.
6.1.4 Storage: Stored Hose and Hose Assemblies must not be subjected to damage that could reduce their expected service life and must be placed in a cool, dark and dry area with the ends capped. Stored Hose and Hose Assemblies must not be exposed to temperature extremes, ozone, oils, corrosive liquids or fumes, solvents, high humidity, rodents, insects, ultraviolet light, electromagnetic fields or radioactive materials.

## PARKER-HANNIFIN CORPORATION OFFER OF SALE

1. Definitions. As used herein, the following terms have the meanings indicated.

## "Buyer" means any customer receiving a Quote for Products.

"Buyer's Property" means any tools, patterns, plans, drawings, designs, specifications materials, equipment, or information furnished by Buyer, or which are or become Buyer's property.
"Confidential Information" means any technical, commercial, or other proprietary information of Seller, including, without limitation, pricing, technical drawings or prints and/or part lists, which has been or will be disclosed, delivered, or made available, whether directly or indirectly, to Buyer.
"Goods" means any tangible part, system or component to be supplied by Seller.
"Intellectual Property Rights" means any patents, trademarks, copyrights, trade dress, trade secrets or similar rights.
"Products" means the Goods, Services and/or Software as described in a Quote.
"Quote" means the offer or proposal made by Seller to Buyer for the supply of Products.
"Seller" means Parker-Hannifin Corporation, including all divisions, subsidiaries and businesses selling Products under these Terms.
"Seller's IP" means patents, trademarks, copyrights, or other intellectual property rights relating to the Products, including without limitation, names, designs, images, drawings, models, software, templates, information, any improvements or creations or other intellectual property developed prior to or during the relationship contemplated herein.
"Services" means any services to be provided by Seller.
"Software" means any software related to the Goods, whether embedded or separately downloaded.
"Special Tooling" means equipment acquired by Seller or otherwise owned by Seller necessary to manufacture Goods, including but not limited to tools, jigs, and fixtures.
"Terms" means the terms and conditions of this Offer of Sale.
2. Terms. All sales of Products by Seller will be governed by, and are expressly conditioned upon Buyer's assent to, these Terms. These Terms are incorporated into any Quote provided by Seller to Buyer. Buyer's order for any Products whether communicated to Seller verbally, in writing, by electronic data interface or other electronic commerce, shall constitute acceptance of these Terms. Seller objects to any contrary or additional terms or conditions of Buyer. Reference in Seller's order acknowledgement to Buyer's purchase order or purchase order number shall in no way constitute an acceptance of any of Buyer's terms or conditions of purchase. Any Quote made by Seller to Buyer shall be considered a firm and definite offer and shall not be deemed to be otherwise despite any language on the face of the Quote. Seller reserves all rights to accept or reject any purported acceptance by Buyer to Seller's Quote if such purported acceptance attempts to vary the terms of the Quote. If Seller ships Products after Buyer issues an acceptance to the Quote, any additional or different terms proposed by Buyer will not become part of the parties' business relationship unless agreed to in a writing that is signed by an authorized representative of Seller, excluding email correspondence. If the transaction proceeds without such agreement on the part of Seller, the business relationship will be governed solely by these Terms and the specific terms in Seller's Quote.
3. Price; Payment. The Products set forth in the Quote are offered for sale at the prices indicated in the Quote. Unless otherwise specifically stated in the Quote, prices are valid for thirty (30) days and do not include any sales, use, or other taxes or duties. Seller reserves the right to modify prices for any reason and at any time by giving ten (10) days prior written notice. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2020). All sales are contingent upon credit approval and full payment for all purchases is due thirty (30) days from the date of invoice (or such date as may be specified in the Quote). Under any circumstances, Buyer may not withhold or suspend payment of any amounts due and payable as a deduction, set-off or recoupment of any amount, claim or dispute with Seller. Unpaid invoices beyond the specified payment date incur interest at the rate of $1.5 \%$ per month or the maximum allowable rate under applicable law. Seller reserves the
right to require advance payment or provision of securities for first and subsequent deliveries if there is any doubt, in Seller's sole determination, regarding the Buyer's creditworthiness or for other business reasons. If the requested advance payment or securities are not provided to Seller's satisfaction, Seller reserves the right to suspend performance or reject the purchase order, in whole or in part, without prejudice to Seller's other rights or remedies, including the right to full compensation. Seller may revoke or shorten any payment periods previously granted in Seller's sole determination. The rights and remedies herein reserved to Seller are cumulative and in addition to any other or further rights and remedies available at law or in equity. No waiver by Seller of any breach by Buyer of any provision of these terms will constitute a waiver by Seller of any other breach of such provision.
4. Shipment; Delivery; Title and Risk of Loss. All delivery dates are approximate, and Seller is not responsible for damages or additional costs resulting from any delay. All deliveries are subject to our ability to procure materials from our suppliers. Regardless of the manner of shipment, delivery occurs and title and risk of loss or damage pass to Buyer, upon placement of the Products with the carrier at Seller's facility. Unless otherwise agreed prior to shipment and for domestic delivery locations only, Seller will select and arrange, at Buyer's sole expense, the carrier and means of delivery. When Seller selects and arranges the carrier and means of delivery, freight and insurance costs for shipment to the designated delivery location will be prepaid by Seller and added as a separate line item to the invoice. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions. Buyer shall not return or repackage any Products without the prior written authorization from Seller, and any return shall be at the sole cost and expense of Buyer.
5. Warranty. The warranty for the Products is as follows: (i) Goods are warranted against defects in material or workmanship for a period of twelve (12) months from the date of delivery or 2,000 hours of use, whichever occurs first; (ii) Services shall be performed in accordance with generally accepted practices and using the degree of care and skill that is ordinarily exercised and customary in the field to which the Services pertain and are warranted for a period of six (6) months from the date of completion of the Services; and (iii) Software is only warranted to perform in accordance with applicable specifications provided by Seller to Buyer for ninety (90) days from the date of delivery or, when downloaded by a Buyer or end-user, from the date of the initial download. All prices are based upon the exclusive limited warranty stated above, and upon the following disclaimer: EXEMPTION CLAUSE; DISCLAIMER OF WARRANTY, CONDITIONS, REPRESENTATIONS: THIS WARRANTY IS THE SOLE AND ENTIRE WARRANTY, CONDITION, AND REPRESENTATION, PERTAINING TO PRODUCTS. SELLER DISCLAIMS ALL OTHER WARRANTIES, CONDITIONS, AND REPRESENTATIONS, WHETHER STATUTORY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THOSE RELATING TO DESIGN, NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE. SELLER DOES NOT WARRANT THAT THE SOFTWARE IS ERROR-FREE OR FAULTTOLERANT, OR THAT BUYER'S USE THEREOF WILL BE SECURE OR UNINTERRUPTED, UNLESS OTHERWISE AUTHORIZED IN WRITING BY SELLER, THE SOFTWARE SHALL NOT BE USED IN CONNECTION WITH HAZARDOUS OR HIGH-RISK ACTIVITIES OR ENVIRONMENTS. EXCEPT AS EXPRESSLY STATED HEREIN, ALL PRODUCTS ARE PROVIDED "AS IS".
6. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon receipt. No claims for shortages will be allowed unless reported to Seller within ten (10) days of delivery. Buyer shall notify Seller of any alleged breach of warranty within thirty (30) days after the date the non-conformance is or should have been discovered by Buyer. Any claim or action against Seller based upon breach of contract or any other theory, including tort, negligence, or otherwise must be commenced within twelve (12) months from the date of the alleged breach or other alleged event, without regard to the date of discovery.

#### Abstract

7. LIMITATION OF LIABILITY. IN THE EVENT OF A BREACH OF WARRANTY, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE THE NON-CONFORMING PRODUCTS, RE-PERFORM THE SERVICES, OR REFUND THE PURCHASE PRICE PAID WITHIN A REASONABLE PERIOD OF TIME. IN NO EVENT IS SELLER LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES INCLUDING ANY LOSS OF REVENUE OR PROFITS, WHETHER BASED IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE PAID FOR THE PRODUCTS.

8. Confidential Information. Buyer acknowledges and agrees that Confidential Information has been and will be received in confidence and will remain the property of Seller. Buyer further agrees that it will not use Seller's Confidential Information for any purpose other than for the benefit of Seller and shall return all such Confidential Information to Seller within thirty (30) days upon request.
9. Loss to Buyer's Property. Buyer's Property will be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer ordering the Products manufactured using Buyer's Property.

Also, Seller shall not be responsible for any loss or damage to Buyer's Property while it is in Seller's possession or control.
10. Special Tooling. Seller may impose a tooling charge for any Special Tooling. Special Tooling shall be and remain Seller's property. In no event will Buyer acquire any interest in the Special Tooling, even if such Special Tooling has been specially converted or adapted for manufacture of Goods for Buyer and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller has the right to alter, discard or otherwise dispose of any Special Tooling or other property owned by Seller in its sole determination at any time.
11. Security Interest. To secure payment of all sums due from Buyer, Seller retains a security interest in all Products delivered to Buyer and, Buyer's acceptance of these Terms is deemed to be a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect Seller's security interest.
12. User Responsibility. Buyer, through its own analysis and testing, is solely responsible for making the final selection of the Products and assuring that all performance, endurance, maintenance, safety and warning requirements of the application of the Products are met. Buyer must analyze all aspects of the application and follow applicable industry standards, specifications, and any technical information provided with the Quote or the Products, such as Seller's instructions, guides and specifications. If Seller provides options of or for Products based upon data or specifications provided by Buyer, Buyer is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products. In the event Buyer is not the end-user of the Products, Buyer will ensure such end-user complies with this paragraph.
13. Use of Products, Indemnity by Buyer. Buyer shall comply with all instructions, guides and specifications provided by Seller with the Quote or the Products. If Buyer uses or resells the Products in any way prohibited by Seller's instructions, guides or specifications, or Buyer otherwise fails to comply with Seller's instructions, guides and specifications, Buyer acknowledges that any such use, resale, or non-compliance is at Buyer's sole risk. Further, Buyer shall indemnify, defend, and hold Seller harmless from any losses, claims, liabilities, damages, lawsuits, judgments and costs (including attorney fees and defense costs), whether for personal injury, property damage, intellectual property infringement or any other claim, arising out of or in connection with: (a) improper selection, design, specification, application, or any misuse of Products; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of Buyer's Property; (d) damage to the Products from an external cause, repair or attempted repair by anyone other than Seller, failure to follow instructions, guides and specifications provided by Seller, use with goods not provided by Seller, or opening, modifying, deconstructing, tampering with or repackaging the Products; or (e) Buyer's failure to comply with
these Terms, including any legal or administrative proceedings, collection efforts, or other actions arising from or relating to such failure to comply. Seller shall not indemnify Buyer under any circumstance except as otherwise provided in these Terms.
14. Cancellations and Changes. Buyer may not cancel or modify, including but not limited to movement of delivery dates for the Products, any order for any reason except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage and any additional expense. Seller, at any time, may change features, specifications, designs and availability of Products.
15. Assignment. Buyer may not assign its rights or obligations without the prior written consent of Seller.
16. Force Majeure. Seller is not liable for delay or failure to perform any of its obligations by reason of any events or circumstances beyond its reasonable control. Such circumstances include without limitation: accidents, labor disputes or stoppages, government acts or orders, acts of nature, pandemics, epidemics, other widespread illness, or public health emergency, cyber related disruptions, cyber-attacks, ransomware sabotage, delays or failures in delivery from carriers or suppliers, shortages of materials, sudden increases in the price of raw material or components, shutdowns or slowdowns affecting the supply of raw materials or components, or the transportation thereof, oil shortages or oil price increases, energy crisis, energy or fuel interruption, war (whether declared or not) or the serious threat of same, riots, rebellions, acts of terrorism, embargoes, fire or any reason whether similar to the foregoing or otherwise. Seller will resume performance as soon as practicable after the event of force majeure has been removed. All delivery dates affected by an event of force majeure shall be tolled for the duration of such event of force majeure and rescheduled for mutually agreed dates as soon as practicable after the event of force majeure ceases to exist. The right to allocate capacity is in the Seller's sole discretion. An event of force majeure shall not include financial distress, insolvency, bankruptcy, or other similar conditions affecting one of the parties, affiliates and/or subcontractors. An event of force majeure in the meaning of these Terms means any circumstances beyond Seller's control that permanently or temporarily hinders performance, even where that circumstance was already foreseen. Buyer shall not be entitled to cancel any orders following its claim of an event of force majeure.
17. Waiver and Severability. Failure to enforce any provision of these Terms will not invalidate that provision; nor will any such failure prejudice either party's right to enforce that provision in the future. Invalidation of any provision of these Terms shall not invalidate any other provision herein and, the remaining provisions will remain in full force and effect.
18. Duration. Unless otherwise stated in the Quote, any agreement governed by or arising from these Terms shall: (a) be for an initial duration of one (1) year; and (b) shall automatically renew for successive one-year terms unless terminated by Buyer with at least 180-days written notice to Seller or if Seller terminates the agreement pursuant to Section 19 of these Terms.
19. Termination. Seller may, without liability to Buyer, terminate any agreement governed by or arising from these Terms for any reason and at any time by giving Buyer thirty (30) days prior written notice. Seller may immediately terminate, in writing, if Buyer: (a) breaches any provision of these Terms, (b) becomes or is deemed insolvent, (c) appoints or has appointed a trustee, receiver or custodian for all or any part of Buyer's property,(d) files a petition for relief in bankruptcy on its own behalf, or one is filed against Buyer by a third party, (e) makes an assignment for the benefit of creditors; or (f) dissolves its business or liquidates all or a majority of its assets.
20. Ownership of Rights. Buyer agrees that (a) Seller (and/or its affiliates) owns or is the valid licensee of Seller's IP and (b) the furnishing of information, related documents or other materials by Seller to Buyer does not grant or transfer any ownership interest or license in or to Seller's IP to Buyer, unless expressly agreed in writing. Without limiting the foregoing, Seller retains ownership of all Software supplied to Buyer. In no event shall Buyer obtain any greater right in and to the Software than a right in a license limited to the use thereof and subject to compliance with any other terms provided with the Software. Buyer further agrees that it will not, directly or through intermediaries, reverse engineer,

08/20
decompile, or disassemble any Software (including firmware) comprising or contained within a Product, except and only to the extent that such activity may be expressly permitted, either by applicable law or, in the case of open source software, the applicable open source license.
21. Indemnity for Infringement of Intellectual Property Rights. Seller is not liable for infringement of any Intellectual Property Rights except as provided in this Section. Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on a third-party claim that one or more of the Products infringes the Intellectual Property Rights of a third party in the country of delivery of the Products by Seller to Buyer. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of any such claim, and Seller having sole control over the defense of the claim including all negotiations for settlement or compromise. If one or more Products is subject to such a claim, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Products, replace or modify the Products to render them non-infringing, or offer to accept return of the Products and refund the purchase price less a reasonable allowance for depreciation. Seller has no obligation or liability for any claim of infringement: (i) arising from information provided by Buyer (including Seller's use of Buyer's Property); or (ii) directed to any Products for which the designs are specified in whole or part by Buyer; or (iii) resulting from the modification, combination or use in a system of any Products. The foregoing provisions of this Section constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for claims of infringement of Intellectual Property Rights.
22. Governing Law. These Terms, the terms of any Quote, and the sale and delivery of all Products are deemed to have taken place in, and shall be governed and construed in accordance with, the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to the sale and delivery of the Products.
23. Entire Agreement. These Terms, along with the terms set forth in the Quote, forms the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale and purchase. In the event of a conflict between any term set forth in the Quote and these Terms, the terms set forth in the Quote shall prevail. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter shall have no effect. No modification to these Terms will be binding on Seller unless agreed to in a writing that is signed by an authorized representative of Seller, excluding email correspondence, 'clickwrap' or other purported electronic assent to different or additional terms. Sections 2-25 of these Terms shall survive termination or cancellation of any agreement governed by or arising from these Terms.
24. No 'Wrap' Agreements/No Authority to Bind. Seller's clicking any buttons or any similar action, such as clicking "I Agree" or "Confirm," to utilize Buyer's software or webpage for the placement of orders, is NOT an agreement to Buyer's Terms and Conditions. NO EMPLOYEE, AGENT OR REPRESENTATIVE OF SELLER HAS THE AUTHORITY TO BIND SELLER BY THE ACT OF CLICKING ANY BUTTON OR SIMILAR ACTION ON BUYER'S WEBSITE OR PORTAL.
25. Compliance with Laws. Buyer agrees to comply with all applicable laws, regulations, and industry and professional standards, including those of the United States of America, and the country or countries in which Buyer may operate, including without limitation the U.S. Foreign Corrupt Practices Act ("FCPA"), the U.S. Anti-Kickback Act ("AntiKickback Act"), U.S. and E.U. export control and sanctions laws ("Export Laws"), the U.S. Food Drug and Cosmetic Act ("FDCA"), and the rules and regulations promulgated by the U.S. Food and Drug Administration ("FDA"), each as currently amended. Buyer agrees to indemnify, defend, and hold harmless Seller from the consequences of any violation of such laws, regulations and standards by Buyer, its employees or agents. Buyer represents that it is familiar with all applicable provisions of the FCPA, the Anti-Kickback Act, Export Laws, the FDCA and the FDA and certifies that Buyer will adhere to the requirements thereof and not take any action that would make Seller violate such requirements. Buyer represents and agrees that Buyer will not make any payment or give anything of value,
directly or indirectly, to any governmental official, foreign political party or official thereof, candidate for foreign political office, or commercial entity or person, for any improper purpose, including the purpose of influencing such person to purchase Products or otherwise benefit the business of Seller. Buyer further represents and agrees that it will not receive, use, service, transfer or ship any Products from Seller in a manner or for a purpose that violates Export Laws or would cause Seller to be in violation of Export Laws. Buyer agrees to promptly and reliably provide Seller all requested information or documents, including end-user statements and other written assurances, concerning Buyer's ongoing compliance with Export Law.

## Parker's Motion \& Control Product Groups

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver.
No company knows more about motion and control technology than Parker.

# Parker Fluid Connectors Group <br> North American Divisions \& Distribution Service Centers 

Your complete source for quality tube fittings, hose \& hose fittings, brass \& composite fittings, quickdisconnect couplings, valves and assembly tools, locally available from a worldwide network of authorized distributors.

## Fittings:

Available in inch and metric sizes covering SAE, BSP, DIN, GAZ, JIS and ISO thread configurations, manufactured from steel, stainless steel, brass, aluminum, nylon and thermoplastic.

## Hose, Tubing and Bundles:

Available in a wide variety of sizes and materials including rubber, wire-reinforced, thermoplastic, hybrid and custom compounds.

## Worldwide Availability:

Parker operates Fluid
Connectors manufacturing locations and sales offices throughout North America, South America, Europe and Asia-Pacific.
